# Photohelic® Pressure Switch/Gages On-Demand Cleaning Controller

**Reverse Pulse-Jet Cleaning Initiated by Differential Pressure** 

The Photohelic<sup>®</sup> Pressure Switch/Gages On-Demand Cleaning Controller provides a simple, complete dust collection

**Cleaning Controller** provides a simple, complete dust collection control all in one enclosure. The Photohelic<sup>®</sup> controller combined with the DCT500DC Timer Control provides a timed energization of solenoid valves when the differential pressure indicates filter cleaning is necessary. The operator can easily set the cleaning initiation and duration by adjusting the 2 set point knobs on the front face of the Photohelic<sup>®</sup> controller. Solenoid valve sequencing is also easily set via two potentiometers inside the enclosure on the timer board. A three position switch on the front of the enclosure offers cleaning versatility by allowing the user to select between ondemand or continuous manual cleaning. The Photohelic<sup>®</sup> controller is pneumatically connected with tubing to fittings on the enclosure. All that is required for start-up is connection of tubing from the process to the external fittings on the enclosure, and wiring the solenoid valves to the timer board.

# **CONTROLLER FEATURES**

- External, manual adjustment of set points with Photohelic<sup>®</sup> controller adjustment knobs.
- On and off time easily set with 2 potentiometers located on the DCT500DC timer board.
- 3 position switch for selecting between On-Demand Cleaning or continuous manual cleaning.
- Photohelic<sup>®</sup> controller pre-connected with tubing to pressure fittings on body of enclosure.
