

## DESCRIPTION

AR Air Regulators in multiple burner systems hold constant airfuel ratio and mixture pressure with reducing burner port area of up to $90 \%$. Used in the air line, the top main diaphragm chamber is referenced through a bleed loader set for the desired burner mixture pressure. The bottom main diaphragm chamber is
referenced downstream of the Flomixer or Flanged Mixing Tee. Mixture pressure and air-fuel ratio are held constant as burners are turned off. Available in sizes 3/4" through 3" NPT for $150^{\circ} \mathrm{F}$ service and 2 psig inlet pressures. Series 5261 is also available for $300^{\circ} \mathrm{F}$ service and 5 psig inlet pressures.

NOTES:

1. Regulator must be perpendicular to pipe run in an upright position.
2. Pipe run must be horizontal and level.
3. All dimensions are in inches
